

# CIVIL AND ARCHITECTURAL ENGR (CAE)

## CAE 100

### Introduction to Engineering Drawing and Design

Introduction to engineering graphics as a problem-solving tool. Basic traditional techniques of orthographic projection, multi-view, pictorial, auxiliary views, dimensioning and tolerance, sectioning, detail drawing. Use of ANSI standards; applications in civil and architectural engineering.

**Lecture:** 1 **Lab:** 2 **Credits:** 2

**Satisfies:** Communications (C)

## CAE 101

### Introduction to AutoCAD Drawing and Design

A continuation of CAE 100. Use of PC-based CAD (Computer-Aided Drawing and Design) software for presentation and problem solving in civil and architectural engineering applications. Introduction to basic principles of design.

**Prerequisite(s):** [(CAE 100)]

**Lecture:** 0 **Lab:** 4 **Credits:** 2

**Satisfies:** Communications (C)

## CAE 105

### Geodetic Science

Measurement of distances and angles. Theory of errors. Study of leveling, traversing, topographic mapping, route surveying, earthwork computation, photometry, and boundary surveys. Practice in the use of tapes, levels, total stations, and PC-based methodology.

**Prerequisite(s):** [(CAE 100\*)]An asterisk (\*) designates a course which may be taken concurrently.

**Lecture:** 2 **Lab:** 2 **Credits:** 3

## CAE 110

### Professional Practice I

This course is an introduction to the engineering profession. The content and delivery have been designed to challenge the student's perspective of oneself and thus make the student a better engineer. The class focus is on developing the skills to become a professional learner and a successful student, increasing team learning skills, self-reflection, enhancing ethical perception and decision making abilities, and understanding the responsibilities as an engineer. In simple terms, the student will begin to "act as an engineer acts."

**Lecture:** 0 **Lab:** 1 **Credits:** 1

## CAE 111

### Professional Practice II

This course continues the introduction to the engineering profession with further studies of team learning, specializations in engineering, enhancing ethical perception and decision making abilities, and understanding the responsibilities as an engineer. The course also looks deeply at the need for continuous innovation by studying and practicing the entrepreneurial mindset needed to create value for oneself as the student, for one's company, and for society. In simple terms, the student will begin to "act as an engineer acts" and "think like an entrepreneur thinks."

**Lecture:** 0 **Lab:** 1 **Credits:** 1

## CAE 208

### Thermal-Fluids Engineering I

Basic principles of thermodynamics applied to engineering systems using pure substances and mixtures as working fluids. Direct application of the laws of thermodynamics to analysis of closed and open systems, mass and energy flow. Extensive analysis of isentropic processes in cycles, analysis of gas mixtures and psychometrics in heating and cooling systems. Introduction to fluid mechanics and analysis of fluid statics problems.

**Prerequisite(s):** [(CHEM 124, CS 104-105, MATH 251\*, and PHYS 123)]An asterisk (\*) designates a course which may be taken concurrently.

**Lecture:** 3 **Lab:** 0 **Credits:** 3

## CAE 209

### Thermal-Fluids Engineering II

Complete the development of fluid mechanics and introduce and develop heat and mass transfer analysis techniques. Description and analysis of fluid kinematics, energy and momentum equations applied to internal/external flow in building engineering systems. Development and application of convection, conduction and radiation to one-, two- and three-dimensional systems in steady state and transient regimes of operation as applied to building materials and geometries.

**Prerequisite(s):** [(CAE 208 and MATH 252\*)]An asterisk (\*) designates a course which may be taken concurrently.

**Lecture:** 3 **Lab:** 0 **Credits:** 3

## CAE 221

### Engineering Geology

Geology and its relationship to civil engineering; minerals; rocks; soil formation; geologic structure; groundwater hydraulics; frost action in soils, landslides, shoreline erosion, bluff instability; earthquakes; air photo interpretation, soil and rock mechanics in relation to engineering geology; subsurface exploration; dams, reservoirs, tunnels; case-history illustrations.

**Lecture:** 2 **Lab:** 2 **Credits:** 3

## CAE 286

### Theory and Concept of Structural Mechanics

Equilibrium for particles and rigid bodies. Distributed forces, centroids, centers of gravity, and moments of inertia. Free body diagrams. Application to truss structures. Kinetics of particles: Newton's Laws of motion, energy, and momentum. Kinematics of particles.

**Prerequisite(s):** [(MATH 152 and PHYS 123)]

**Lecture:** 3 **Lab:** 0 **Credits:** 3

## CAE 287

### Mechanics of Structural Materials

The concepts of deformation, strain, and stress. Application of free body diagram in shear force and bending moment diagram. Elementary bending theory, normal and shear stresses in beams, and beam deflection. Axially loaded members and Euler buckling theory. Plane stress and strain, Mohr's circle, and torsion of circular sections. Combined loading.

**Prerequisite(s):** [(CAE 286) OR (MMAE 200)]

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 302**

**Fluid Mechanics and Hydraulics**

Fundamental concepts; fluid statics; properties of fluid in motion; fluid flows through orifices, weirs and venturi meters; laminar and turbulent flow in closed conduits; flow in open channels; turbo machinery; measurement in fluid mechanics and hydraulics.

**Prerequisite(s):** [(MATH 252)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 303**

**Structural Design I**

Design loads, factors of safety; load and resistance factors for steel structures. Experimental and analytical study of steel materials subjected to various states of stress. Failure theories, yield and post-yield criteria are treated. Fatigue and fracture mechanics phenomena are related to design practice. The design of tension member, beams, and columns in steel.

**Prerequisite(s):** [(CAE 287) OR (MMAE 202)]

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies:** CAE Design Course (D)

**CAE 304**

**Structural Analysis I**

The analysis of statically determinate trusses and frames. Determination of internal forces and calculation of deflections. Application of the principle of virtual work and energy methods. Column stability.

**Prerequisite(s):** [(CAE 287) OR (MMAE 202)]AND[(MATH 252)]

**Lecture: 2 Lab: 2 Credits: 3**

**CAE 307**

**Structural Design II**

Design loads, factor of safety, load and resistance factors for concrete structures. Properties of concrete-making materials and the proportioning of concrete mixtures. Experimental and analytical study of plain and reinforced concrete subjected to various states of stress. Failure theories and the ultimate strength of plain and reinforced concrete structural components. The design of beams, columns, and slabs in reinforced concrete.

**Prerequisite(s):** [(CAE 304 and CAE 315\*)]An asterisk (\*) designates a course which may be taken concurrently.

**Lecture: 2 Lab: 3 Credits: 3**

**Satisfies:** Communications (C), CAE Design Course (D)

**CAE 312**

**Engineering Systems Analysis**

Systems concept process, interest rate, present and future worth values, evaluation of alternatives, and elements of microeconomics. Theory of probability, laws of probabilities, random variables and distribution functions, functions of random variables, statistical estimations of data, mean and standard deviation, correlation, and regression analysis.

**Prerequisite(s):** [(MATH 251)]

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies:** Communications (C)

**CAE 315**

**Materials of Construction**

Physical principles of elastic and plastic deformation of construction. Mechanical testing methods including tensile, compressive, toughness, creep and fatigue. Properties of concrete, wood, iron and steel and other construction materials. The emphasis is on concepts from solid mechanics which explain the behavior of materials to the extent needed in the design of load-bearing constructs.

**Prerequisite(s):** [(CAE 287) OR (MMAE 202)]

**Lecture: 2 Lab: 3 Credits: 3**

**Satisfies:** Communications (C)

**CAE 323**

**Introduction to Geotechnical Engineering**

Physical and mechanical properties of soil; elementary principles of soil identification and testing. Principles of soil permeability and seepage, consolidation, failure theories, earth pressures, and bearing capacity. Laboratory included.

**Prerequisite(s):** [(CAE 209) OR (CAE 302)]AND[(CAE 287) OR (MMAE 202)]

**Lecture: 2 Lab: 3 Credits: 3**

**Satisfies:** Communications (C)

**CAE 331**

**Building Science**

Study of the physical interaction of climate (humidity, temperature, wind, sun, rain, snow, etc.) and buildings. Topics include psychrometrics, indoor air quality, indoor thermal comfort, heat transfer, air infiltration, solar insolation, and heating and cooling load calculation.

**Prerequisite(s):** [(CAE 209) OR (CHE 302) OR (MMAE 322)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 383**

**Electrical and Electronic Circuits**

Introduction to electrical and electronic circuits. AC and DC steady state and transient network analysis. Phasors, AC and Three Phase Power. Diodes, transistors, and operational amplifiers.

**Prerequisite(s):** [(MATH 252 and PHYS 221)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 401**

**Hydraulics, Hydrology, and Their Applications**

Collection and distribution of water. Flow of fluids through orifices, weirs, venturi meters. Laminar and turbulent flow in closed conduits. Open channel flow. Model analysis using the principles of dimensional analysis. Rainfall and runoff.

**Prerequisite(s):** [(MATH 252\*)]An asterisk (\*) designates a course which may be taken concurrently.

**Lecture: 2 Lab: 3 Credits: 3**

**CAE 403****Sound and Vibration Control in Buildings**

Basic sound physics and sound propagation in enclosed spaces. Sound and vibration sources in and out of buildings. Theories of sound transmission through building elements. Effects of noise and vibration on man and buildings, criteria and standards. Design of noise control systems. Calculation of airborne and impact sound insulation. Noise and vibration control implementations in various indoor spaces, such as residential units, offices, schools and mechanical rooms.

**Lecture: 2 Lab: 1 Credits: 3**

**CAE 408****Bridge and Structural Design**

Design of modern bridges, bridge design requirements, LRFD approach, seismic and wind effects, fatigue in bridges, support design.

**Prerequisite(s):** [(CAE 431\*)]An asterisk (\*) designates a course which may be taken concurrently.

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies:** CAE Design Course (D)

**CAE 409****Analysis and Design of Acoustic Performance Spaces**

This course will discuss the design of acoustic spaces such as conference rooms, classrooms, lecture halls, music halls, theater, churches, recording studio, and home theater. Course covers the selection and determination of appropriate steady state, spatial, and temporal acoustic measures such as background noise levels, reverberation time, speech transmission index, and interaural cross correlation, as well as the selection of building materials and layout of rooms to meet those requirements.

**Prerequisite(s):** [(CAE 403)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 410****Introduction to Wind and Earthquake Engineering**

Kinematics of Particles, Newton's laws of motion, energy and momentum. Kinematics of rigid bodies. Fundamentals of free, forced, and transient vibration of single and multi-degree of freedom structures. Analysis and design of structures for wind and earthquake loadings. Building code requirements. Instructor's consent may be granted to students who do not meet the prerequisite.

**Prerequisite(s):** [(CAE 411\*)]An asterisk (\*) designates a course which may be taken concurrently.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 411****Structural Analysis II**

The analysis of statically indeterminate frames. Application of classical methods including superposition, slope deflection, and moment distribution. Introduction to the direct stiffness method and computer analysis of structures.

**Prerequisite(s):** [(CAE 304)]

**Lecture: 2 Lab: 3 Credits: 3**

**CAE 412****Traffic Engineering Studies and Design**

Basic traffic engineering studies including traffic volume, speed, accident, and parking studies. Capacity and analysis for various traffic facilities. Design of traffic control devices.

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies:** CAE Design Course (D)

**CAE 415****Pavement Design, Construction and Maintenance**

Pavement types, stresses in flexible and rigid pavements, vehicle pavement interaction. Mathematical models for pavement systems, sub grade support, design of flexible and rigid pavements. Construction procedure, drainage considerations, environmental effects. Rehabilitation and maintenance of pavements.

**Prerequisite(s):** [(CAE 323)]

**Lecture: 3 Lab: 3 Credits: 4**

**CAE 416****Facility Design of Transportation Systems**

Design and analysis of facilities of transportation systems. Integration of select transportation components and their interrelationships. Design of specific facilities: guide ways, terminals, and other elements for railroads, airports, and harbors.

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies:** CAE Design Course (D)

**CAE 417****Railroad Engineering and Design**

History of railroad industry. Train operation, train make-up, and handling. Design and analysis of railroad track structure, track irregularities, and their representation. Vehicle/track interaction and dynamic problems associated with it. Performance of railway vehicles.

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies:** Communications (C), CAE Design Course (D)

**CAE 419****Introduction to Transportation Engineering and Design**

Highway functions, design controls and criteria, element of design, cross-section elements, local roads and streets, at-grade intersections, grade separation and interchanges, highway capacity analysis, and introduction to pavement management.

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies:** CAE Design Course (D)

**CAE 421****Risk Assessment Engineering**

Description and concept of risk, relationship between the likelihood of loss and the impact of loss, engineering hazards assessment and risk identification and evaluation using fault tree analysis, failure mode and effect analysis, etc., risk analyses applications with practical statistics.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 422****Sprinklers, Standpipes, Fire Pumps, Special Suppression, and Detection Systems**

Review and introduction to fluid dynamics applied to sprinklers, standpipes, fire pumps, and special suppression systems; hydraulic design criteria and procedures for sprinklers requirements, standpipes, fire pumps, special suppression systems, and detection and alarm systems using nationally recognized design (National Fire Protection Association) standards, water supply requirement systems and distributions.

**Prerequisite(s):** [(CAE 209) OR (CAE 302)]

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 424****Introduction to Fire Dynamics**

Introduction to fire, physics and chemistry, and mass and heat transfer principles, fire fluid mechanic fundamentals, fundamentals and requirements of the burning of materials (gases, liquids, and solids), fire phenomena in enclosures such as pre-flashover and post-flashover.

**Prerequisite(s):** [(CAE 209)]

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 425****Fire Protection and Life Safety in Building Design**

Fundamentals of building design for fire and life safety. Emphasis on a systematic design approach. Basic considerations of building codes, fire loading, fire resistance, exit design, protective systems, and other fire protection systems.

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 430****Probability Concepts in Civil Engineering Design**

Introduction to probability, modeling, and identification of nondeterministic problems in civil engineering. Development of stochastic concepts and simulation models and their relevance to design and decision problems in various areas of civil engineering.

**Prerequisite(s):** [(MATH 252)]

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**Satisfies:** CAE Design Course (D)

**CAE 431****Steel Design**

Design of steel beams, plate girders, and beam columns. Bolted and welded connections. Design of typical frame systems.

**Prerequisite(s):** [(CAE 303, CAE 304, and CAE 315\*)]An asterisk (\*) designates a course which may be taken concurrently.

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**Satisfies:** CAE Design Course (D)

**CAE 432****Concrete and Foundation Design**

Design of reinforced concrete building frames and continuous structures. Design of girders, slabs, columns, foundations, and retaining walls.

**Prerequisite(s):** [(CAE 307)]

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**Satisfies:** CAE Design Course (D)

**CAE 433****Repair of Existing Building Structures**

Building repair and retrofit issues are discussed. Specific requirements of a building for repair and/or reconstruction are emphasized. Methods of assessing building conditions, including forensic structural engineering are covered. Repair and strengthening methods based on types of materials (steel, concrete, masonry, timber), occupancy and function (residential, commercial), and building values are covered along with demonstration case studies and illustrative examples.

**Prerequisite(s):** [(CAE 431 and CAE 432)]

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 435****Experimental Analysis of Structures**

The analysis of structures (prototypes) with the aid of models constructed from metal, wood, plastics, and other materials. Geometrical, mathematical, demonstration, graphical and direct and indirect models will be treated. Comparisons of experimental results with results from computer models will be made. Similitude and the theory of models will be treated. Individual and group project work will be emphasized.

**Prerequisite(s):** [(CAE 304 and CAE 411)]

**Lecture:** 2 **Lab:** 2 **Credits:** 3

**CAE 436****Design of Masonry and Timber Structures**

Design of unreinforced and reinforced masonry structural elements and structures. Serviceability and ultimate capacity design.

Seismic response, resistance, and design. Design of wood columns and bending members. Mechanical fasteners and connectors.

Instructor's consent may be granted to students who do not meet the prerequisite.

**Prerequisite(s):** [(CAE 307)]

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**Satisfies:** CAE Design Course (D)

**CAE 437****Homeland Security Concerns in Engineering Systems**

Review of blast effects produced by solid phase weapons and their effects on structures and people. Estimation of the risk of threats to security of public and private systems and facilities.

Review of simplified structural methods for the analysis and design of structures to meet homeland security concerns and procedures to minimize casualties. Analysis of post-attack fires and how to prevent them. Examination of potential risk to security of infrastructure systems. Development of contingency plans to include evacuation preparedness at time of emergency.

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 439****Introduction to Geographic Information Systems**

Geographic information system (GIS) technology allows databases which display and query information in new ways. This course will teach general GIS and GPS skills and concepts, useful to students and practitioners in a variety of disciplines. Students will complete a final GIS project relevant to their field of study. This hands-on class will use ESRI's Arc View and Spatial Analyst products, as well as Trimble GeoExplorer GPS units.

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 446****Net Zero Energy Home Design Competition I**

This is a project-based course in which students will compete in the Department of Energy's annual Race to Zero home design competition. The goal is for an interdisciplinary team of students to design and provide full documentation for a home that meets the Department of Energy's Zero Energy Ready Home Requirements. Teams are expected to effectively and affordably integrate principles of building science, construction engineering and management, economic analysis, and architectural design in an integrated design process. Teams will be required to submit full sets of plans, drawings, renderings, construction details, and analyses for energy efficiency, costs, and affordability. The competition is designed to provide the next generation of architects, engineers, construction managers, and entrepreneurs with skills and experience to start careers in clean energy and generate creative solutions to real-world problems. CAE 446 is the first course in a two-course series. CAE 446 focuses on aspects of the building design. Priority is given to Architectural Engineering and Architecture majors.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 447****Net Zero Energy Home Design Competition II**

This is a project-based course in which students will compete in the Department of Energy's annual Race to Zero home design competition. The goal is for an interdisciplinary team of students to design and provide full documentation for a home that meets the Department of Energy's Zero Energy Ready Home Requirements. Teams are expected to effectively and affordably integrate principles of building science, construction engineering and management, economic analysis, and architectural design in an integrated design process. Teams will be required to submit full sets of plans, drawings, renderings, construction details, and analyses for energy efficiency, costs, and affordability. The competition is designed to provide the next generation of architects, engineers, construction managers, and entrepreneurs with skills and experience to start careers in clean energy and generate creative solutions to real-world problems. CAE 447 is the second course of a two-course series. CAE 447 focuses on the final project reporting and submission. Priority is given to Architectural Engineering and Architecture majors.

**Prerequisite(s): [(CAE 446)]**

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 457****Geotechnical Foundation Design**

Methods of subsoil exploration. Study of types and methods of design and construction of foundations for structures, including single and combined footings, mats, piles, caissons, retaining walls, and underpinning. Drainage and stabilization.

**Prerequisite(s): [(CAE 302 and CAE 323)]**

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies: CAE Design Course (D)**

**CAE 461****Plumbing and Fire Protection Design**

Study of plumbing systems, water supply, and venting systems. Study of fire protection systems for buildings including pipe sizing, pumps, sprinklers, gravity and pressure vessels, and controls.

**Prerequisite(s): [(CAE 209) OR (CAE 302) OR (MMAE 310)]**

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies: CAE Design Course (D)**

**CAE 463****Building Enclosure Design**

Design of building exteriors, including the control of heat flow, air and moisture penetration, building movements, and deterioration. Study of the principle of rain screen walls and of energy conserving designs. Analytical techniques and building codes are discussed through case studies and design projects.

**Prerequisite(s): [(CAE 331)]**

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies: CAE Design Course (D)**

**CAE 464****HVAC Systems Design**

Study of the fundamental principles and engineering procedures for the design of heating, ventilating, and air conditioning systems; HVAC system characteristics; system and equipment selection; duct design and layout. Attention is given to energy conservation techniques and computer applications.

**Prerequisite(s): [(CAE 331) OR (CAE 513) OR (MMAE 322)]**

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies: CAE Design Course (D)**

**CAE 465****Building Energy Conservation Technologies**

Identification of the optimal energy performance achievable with various types of buildings and service systems. Reduction of infiltration. Control systems and strategies to achieve optimal energy performance. Effective utilization of daylight, heat pumps, passive and active solar heaters, heat storage and heat pipes in new and old buildings.

**Prerequisite(s): [(CAE 331) OR (CAE 531)]**

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies: CAE Design Course (D)**

**CAE 466****Building Electrical Systems Design**

Study of the analysis and design of electrical systems in buildings utilizing the National Electric Code. Topics include AC, DC, single-phase and three-phase circuits, transients, branch circuits, panel boards, system sizing, fault calculations and overcurrent protection design. Also studies the design and specification of emergency power backup and alternative power systems.

**Prerequisite(s): [(CAE 383) OR (ECE 215 and ECE 216)]**

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 467****Lighting Systems Design**

An intensive study of the calculation techniques and qualitative aspects of good luminous design. Topics covered include: photometric quantities and color theory, visual perception, standards, daylight and artificial illumination systems, radiative transfer, fixture and lamp characteristics, control devices, and energy conservation techniques. Design problems, field measurements, computer, and other models will be used to explore major topics.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 468****Architectural Design**

Architectural Design is the first of a two-part sequence of architectural design and planning for architectural engineers. Students learn the basic theory and practice of the architectural design process from the architect's perspective. Topics include the logical process of architectural design development, integration of code requirement, design approach, and architectural presentation techniques taught through lecture and lab instruction.

**Prerequisite(s):** [(CAE 331)]

**Lecture: 2 Lab: 2 Credits: 3**

**CAE 470****Construction Methods and Cost Estimating**

The role of estimating in construction contract administration. Types of estimates. Unit costs and production rates; job costs. Preparing bid for complete building project using manual methods and the CSI format; checking quantity take-off and cost estimating in selected divisions using a computer package.

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies:** CAE Design Course (D)

**CAE 471****Construction Planning and Scheduling**

Planning, scheduling, and progress control of construction operations. Critical Path Method and PERT. Resource leveling of personnel, equipment, and materials. Financial control/hauling of construction projects. Impact of delay on precedence networks. Construction contract administration. Computer applications.

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies:** Communications (C), CAE Design Course (D)

**CAE 472****Construction Site Operation**

Construction site layout and mobilization. Liabilities of the parties. Methods of construction. Concrete form design and fabrication. Scaffolding, temporary facilities, and equipment. Safety on sites. Introduction to construction productivity.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 473****Construction Contract Administration**

Characteristics of the construction industry. Project delivery systems. Duties and liabilities of the parties at the pre-contract stage. Bidding. Contract administration including duties and liabilities of the parties regarding payments, retainage, substantial and final completion, scheduling and time extensions, change orders, changed conditions, suspension of work, contract termination, and resolution of disputes. Contract bonds. Managing the construction company. Labor law and labor relations.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 482****Hydraulic Design of Open Channel Systems**

Uniform flow design; backwater profiles in natural streams; gradually varied flow practical problems; spatially varied flow; flow through nonprismatic and nonlinear channels; gradually varied unsteady flow; rapidly varied unsteady flow; flood routing; numerical solutions of open channels.

**Lecture: 3 Lab: 0 Credits: 3**

**Satisfies:** CAE Design Course (D)

**CAE 486****Soil and Site Improvement**

Theory of water flow through porous media. Site improvement techniques including grading and drainage, dewatering, reinforcement, and slurry trenches. Soil improvement techniques including replacement, in situ compaction, preloading and subsurface drainage, grouting, freezing, prewetting, and heating.

**Prerequisite(s):** [(CAE 323)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 491****Undergraduate Research**

Special research problems in civil and architectural engineering under individual supervision of instructor. Seminar presentation is required. (Credit: Variable; maximum 4 credit hours). Prerequisite: Senior standing, minimum GPA of 3.0, and consent of the instructor.

**Credit: Variable**

**CAE 495****Capstone Senior Design**

A group project requiring the integration of multiple engineering disciplines to satisfy client requirements for a real engineering project. Students will be required to demonstrate mastery in the application of numerous engineering disciplines to a project, work as a member of an integrated engineering team, and demonstrate the ability to understand and communicate engineering solutions to a client verbally, visually, and in written form. Course is required to satisfy ABET program objectives.

**Lecture: 2 Lab: 3 Credits: 3**

**Satisfies:** CAE Design Course (D)

**CAE 497****Special Project**

Special design project under individual supervision of instructor. Prerequisite: Senior standing, minimum GPA of 3.0, and consent of instructor.

**Credit: Variable**

**CAE 502****Acoustics and Lighting**

General introduction to the aural and visual environment. Subjective and objective scales of measurement. Laws of psychophysics. Introduction to vibration. The hearing mechanism. Transfer of sound. Passive control of noise in buildings, transmission loss. Absorption and reverberation time. Active control of the aural environment. Visual perception. Photometry, brightness, luminance and illumination. Natural lighting of buildings. Artificial lighting.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 503****Advanced Structural Analysis**

Introduction to the mechanics of solids. Energy methods and the calculus of variations. Ritz/Galerkin approximation methods. Introductory discussions on elastic stability and plate analyses.

**Prerequisite(s):** [(CAE 411) OR (CAE 514\*) OR (MMAE 501\*)] An asterisk (\*) designates a course which may be taken concurrently.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 504****Seismic Retrofit and Earthquake Hazard Reduction**

Selection of site-dependent earthquake for retrofit. Strength and ductility of aging structures. Cyclic behavior and modeling of structures under seismic loading. Performance-based retrofit criteria. Evaluating earthquake vulnerability of existing buildings and bridges. Upgrading lateral load-carrying systems. Conceptual basis for seismic isolation and energy-absorbing techniques and their applications in earthquake hazard reduction in existing bridges and buildings. Selection of retrofit methods. Case studies of seismic retrofit of typical buildings, bridges, and industrial facilities using strength upgrading, energy dissipation devices, and base isolation.

**Prerequisite(s):** [(CAE 529)]

**Lecture: 4 Lab: 0 Credits: 4**

**CAE 506****Building Envelope Rehabilitation**

Repair and rehabilitation of existing building exterior envelopes. The course will include problem identification, investigative techniques, repair methods, preparation of remedial design documents and general management of rehabilitation projects. Types of constructions include buildings, exterior walls, facades, cladding, roofing, plazas, porches, fire escapes, and others.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 507****Control of Sound and Vibration in Buildings**

Basic sound physics and sound propagation in enclosed spaces. Sound and vibration sources in and out of buildings. Theories of sound transmission through building elements. Effects of noise and vibration on man and buildings, criteria and standards. Design of noise control systems. Calculation of airborne and impact sound insulation. Noise and vibration control implementations in various indoor spaces, such as residential units, offices, schools and mechanical rooms.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 508****Advanced Bridge Engineering**

Specifications for bridge design and evaluation. Advanced bridge design and evaluation topics such as design load envelope, seismic load design, bridge condition rating, bridge load rating, and steel bridge fatigue evaluation. Bridge management systems. Life cycle analyses. Use of high performance materials in bridge engineering.

**Prerequisite(s):** [(CAE 408)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 509****Analysis and Design of Acoustic Spaces**

This course will discuss the design of acoustic spaces such as conference rooms, classrooms, lecture halls, music halls, theater, churches, recording studio, and home theater. Course covers the selection and determination of appropriate steady state, spatial, and temporal acoustic measures such as background noise levels, reverberation time, speech transmission index, and interaural cross correlation, as well as the selection of building materials and layout of rooms to meet those requirements.

**Prerequisite(s):** [(CAE 502) OR (CAE 542)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 510****Dynamics of Fire**

Introduction to fire, physics and chemistry, and mass and heat transfer principles, fire fluid mechanic fundamentals, fundamentals and requirements of the burning of materials (gases, liquids, & solids), fire phenomena in enclosures such as pre-flashover and post-flashover.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 511****Fire Protection of Buildings**

Fundamentals of building design for fire and life safety. Emphasis on a systematic design approach. Basic considerations of building codes, fire loading, fire resistance, exit design, protective systems & other fire protection systems. For architects, and engineers not majoring in fire protection and safety engineering.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 512****Computer Modeling of Fire**

Introduction to fire heat transfer processes and fire testing materials; application of a set of quantitative engineering tools (fire models) to construct a description of conditions that occur or might occur during the course of a fire; life and structural impacts from hostile fires in buildings.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 513****Building Science**

Study of the physical interaction of climate (humidity, temperature, wind, sun, rain, snow, etc.) and buildings. Topics include psychrometrics, indoor air quality, indoor thermal comfort, heat transfer, air infiltration, solar insolation, and heating and cooling load calculation.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 514****Mathematical Methods for Structural Engineering**

Matrices, linear spaces and transformations, eigenvalue problems, and their application to civil engineering. First-order differential equations for structural dynamics. Calculus of variations and variational principles for dynamics and statics. Rayleigh-Ritz method, finite element approximations, Newmark-Beta method, Green's Function, and Duhamel Integral and their application to civil engineering.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 515****Building Energy Modeling**

Building energy modeling (BEM) is the core of building information modeling (BIM) and sustainable design which are changing the way of architectural design and engineering. This course builds essential knowledge of building performance simulation and provides necessary background to use a building energy simulation software tool. Proven methods for using BEM to deal with such essential building performance and sustainability issues will be presented by using real world examples placing particular emphasis on using BEM-enabled quantitative analysis to evaluate design alternatives for the whole life cycle of a building. Complete with coverage of integrated design and lean construction requirements, this is a valuable course for architects, engineers, and construction professionals involved in energy performance modeling for buildings.

**Prerequisite(s):** [(CAE 513)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 516****Lighting Systems Design and Analysis**

Intensive study of the calculation techniques and quantitative aspects of good luminous design. Topics covered include photometric quantities and color theory, visual perception, IESNA standards, daylight and artificial illumination, radiative transfer, luminaire characteristics, control systems, and energy conservation techniques. Design and analysis problems, field measurements, and use of industry computer simulations for design and luminaire systems.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 518****Advanced Reinforced Concrete**

Mechanical properties of hardened concrete, including creep phenomena. Ultimate strength of columns, beams and beam-columns. Introduction to limit analysis of frames and yield-line analysis of plates.

**Prerequisite(s):** [(CAE 432\*)]An asterisk (\*) designates a course which may be taken concurrently.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 520****Buckling of Structures**

Review of simple column buckling for various conditions. Basic considerations of stable and unstable equilibrium. Determination of buckling loads of columns with variable cross-section. Analysis of elastic stability of framed structures. Approximate solutions of more complicated problems by various numerical and energy methods. Analysis of lateral and torsional stability of beams and beam-columns. Stability in the inelastic range of columns. Buckling of plates and cylindrical shells.

**Prerequisite(s):** [(CAE 411 and CAE 431)]

**Lecture: 4 Lab: 0 Credits: 4**

**CAE 521****Building Illumination Design**

An intensive study of the calculation techniques and qualitative aspects of good luminous design. Topics covered include photometric quantities and color theory, visual perception, standards, daylight and artificial illumination systems, radiative transfer, fixture and lamp characteristics, control devices and energy conservation techniques. Design problems, field measurements, computer and other models will be used to explore the major topics.

**Prerequisite(s):** [(CAE 467) OR (CAE 502) OR (CAE 515)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 522****Structural Model Analysis**

Theory of measurements, statistics, similitude, and model laws and the usefulness of structural models. Displacement and strain measurement techniques. Theory and practice of indirect model analysis. Theory and practice of direct model techniques including photo elasticity and Moire methods.

**Prerequisite(s):** [(CAE 503)]

**Lecture: 2 Lab: 2 Credits: 4**

**CAE 523****Statistical Analysis of Engineering Data**

Descriptive statistics and graphs, probability distribution, random sampling, independence, significance tests, design of experiments, regression, time series analysis, statistical process control, and introduction to multivariate analysis.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 524****Building Enclosure Design**

Design of building exteriors, including the control of heat flow, air and moisture penetration, building movements, and deterioration. Study of the principle of rain screen walls and of energy conserving designs. Analytical techniques and building codes are discussed through case studies and design projects.

**Prerequisite(s):** [(CAE 513)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 525****Advanced Steel and Composite Structures**

Torsion and web openings. Behavior and design of rigid and semi rigid beam-to-column connections and base plates. Inelastic behavior of steel and composite members and systems under severe cyclic loading. Design of steel-concrete composite and hybrid systems. P-delta effect and design considerations for system stability. Design of special and ordinary moment-resisting frames. Design of concentrically and eccentrically braced frames. Design of bracing for stability. Plate girders. Fatigue and fracture.

**Prerequisite(s):** [(CAE 431\*)]An asterisk (\*) designates a course which may be taken concurrently.

**Lecture: 4 Lab: 0 Credits: 4**

**CAE 526****Energy Conservation Design in Buildings**

Identification of the optimal energy performance achievable with various types of buildings and service systems. Reduction of infiltration. Control systems and strategies to achieve optimal energy performance. Effective utilization of daylight, heat pumps, passive and active solar heaters, heat storage and heat pipes in new and old buildings.

**Prerequisite(s):** [(CAE 331) OR (CAE 513)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 527****Control of Building Environmental Systems**

Introduction to automatic control systems. Control issues related to energy conservation, indoor air quality and thermal comfort in buildings. Classification of HVAC control systems. Control systems hardware: selection & sizing of sensors, actuators & controllers. Practical HVAC control systems; elementary local loop and complete control systems. Case studies. Computer applications.

**Prerequisite(s):** [(CAE 513) OR (CAE 531)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 528****Building Electrical Systems Design**

Study of the analysis and design of electrical systems in buildings utilizing the National Electric Code. Topics include AC, DC, single phase and three-phase circuits, transients, branch circuits, panel boards, system sizing, fault calculations and overcurrent protection design. Also studies the design and specification of emergency power backup and alternative power systems. Previous coursework in electrical circuits is required. Permission from the instructor is required.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 529****Dynamics of Structures**

Fundamentals of free, forced, and transient undamped and viscously damped vibration of single and multi-degree of freedom structures. Time, frequency, and approximate methods of analysis. Application of numerical methods in time and frequency domain. Response spectra, modes, coupling and modal space. Response history and response spectrum analyses and an introduction to earthquake engineering.

**Prerequisite(s):** [(CAE 411)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 530****Finite Element Method of Analysis**

Advanced and special topics in finite element analysis such as finite element-boundary element method, plates, and shell analysis using finite elements.

**Prerequisite(s):** [(CAE 411)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 532****Analysis of Plates and Shells**

Exact and approximate stress analysis of elastic, isotropic plates of various shapes acted upon by forces in their plane, as well as transverse forces. Stability of plates with various edge conditions, orthotropic plates, elastically supported plates and simple cylinders. Approximate methods such as finite differences, finite elements and the methods of Ritz and Galerkin.

**Prerequisite(s):** [(CAE 503)]

**Lecture: 4 Lab: 0 Credits: 4**

**CAE 533****Theory and Analysis of Thin Shells**

Differential geometry of surfaces. Elastic theory of general shells with nonorthogonal curvilinear coordinates. Specialization to cylindrical shells, shells of revolution and translational shells. Exact and approximate solutions applied to the bending membrane theories of thin shells. Approximate methods including finite differences, finite elements and methods associated with Ritz, Galerkin, Puchler and Gaeckler.

**Prerequisite(s):** [(CAE 503)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 534****Computational Techniques in Finite Element Analysis**

Survey of numerical methods as applied to FEM software. Database management, equation solvers, eigen value routines and schemes for direct integration (both implicit/explicit), all as employed in the development of a finite element program. Topics covered also include band and front minimizers, static and dynamic substructuring via super elements and sensitivity studies. Same as MAE 538.

**Prerequisite(s):** [(CAE 530\*)]An asterisk (\*) designates a course which may be taken concurrently.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 535****Nonlinear Finite Element Analysis**

FEM as applied to nonlinear problems. Contact problems, the mechanics of large deformation, full and updated Lagrange formulations, review of plasticity, solution algorithms, Eulerian approaches, application to FEM to limit analysis. Same as MAE 539.

**Prerequisite(s):** [(CAE 442) OR (CAE 514) OR (MMAE 501)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 537****Homeland Security Concerns in Building Designs**

Review of blast effects produced by solid phase weapons and their effects on structures and people. Estimation of the risk of a terrorist attack and the corresponding threat. Review of simplified methods for the analysis and design of structures to meet homeland security concerns and procedures to minimize casualties. Analysis of post event fires and how to prevent them. Review of security measures to minimize the effects of blast on buildings and people.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 539****Introduction to Geographic Information Systems**

Geographic information system (GIS) technology allows users to combine tabular information with maps, creating powerful spatial databases which display and query information in new ways. This course will teach general GIS and GPS skills and concepts, useful to students and practitioners in a variety of disciplines. Students will complete a final GIS project relevant to their field of study. This hands-on class will use ESRI's ArcView and Spatial Analyst products, as well as Trimble GeoExplorer GPS units.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 540****Asphalt and Concrete Mix Design**

Types of asphalt and physical properties of asphalt. Types of mixes: dense graded, open graded, base courses, and maintenance mixes. Types of pavement structures and hot mix asphalt placement. Aggregate physical properties, tests, and blending. Maintenance and rehabilitation materials. Mixture design procedures, including Marshall and Hveem procedures, and weight-volume relationships. Evaluation of mixture properties, engineering property's importance to performance, resilient modulus, fatigue, and creep testing, and thermal cracking properties. Laboratory included.

**Lecture: 2 Lab: 3 Credits: 3**

**CAE 541****Pavement Evaluation and Management**

Pavement management systems (PMS) concepts, network definition, condition survey, pavement condition index (PCI), non-destructive deflection testing (NDT), measurement of roughness and skid resistance, micropaver PMS, PMS implementation, project and network-level management, maintenance alternatives, development of annual and long-range work plans.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 543****Demand Models for Urban Transportation**

Fundamental theory of supply and demand, transportation economics, network equilibrium, land use and transportation equilibrium. Demand models: trip generation, geographical distribution, mode split, route assignment, the direct-demand model and disaggregate-behavioral-demand models. Special properties of models. Relationships among models.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 544****Urban Transportation Planning**

Exploration of the goals of urban transportation. Program planning in relating transportation technology to social, economic, and environmental systems. Systems analysis in forecasting urban land use and travel demand and evaluating alternatives in transportation planning to reach a balance between demand and supply.

**Lecture: 4 Lab: 0 Credits: 4**

**CAE 545****Traffic Operations and Flow Theory**

Studies of space and time distribution of speed and other traffic characteristics in the transportation network. Macro, micro, and mesoscopic traffic flow theories. Simulation in traffic networks. Application of flow theories to traffic control and operations.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 546****Public Transportation Systems**

Operational and economic characteristics of urban systems. Transit planning process: demand for transit, transit routing, transit scheduling, network design. Improvements of existing systems and exploration of new technologies.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 547****Advanced Traffic Engineering**

Data collection, statistical analysis, and interpretation of traffic information. Advanced traffic engineering topics such as signaling, street-and-highway capacity analysis, and highway safety research.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 548****Transportation Systems Management**

Transportation as a system. Problems of traffic congestion, land use/transportation intersection; intersection control; freeway and arterial incident management; safety considerations; evaluation of strategies; case studies.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 549****Transportation Economics, Development and Policy**

Application of managerial, micro- and macroeconomic concepts to transportation systems. Investment and impact analysis. Transport policy as it relates to social, economic and environmental issues. Legislative actions affecting transport issues.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 551****Prestressed Concrete**

Theory and design of prestressed concrete members and structure. Applications to both simple and continuous girder and frames subjected to stationary or moving loads. Prestressed cylindrical shells.

**Prerequisite(s):** [(CAE 432\*)]An asterisk (\*) designates a course which may be taken concurrently.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 553****Measurement and Instrumentation in Architectural Engineering**

Hands-on experience with energy and indoor air quality measurements in buildings including experimental design, data analysis, and experimental statistics. Measurements and techniques covered include: thermal performance (e.g., thermal conductivity and resistance, heat flux, and temperature); fluid flows and HVAC characteristics (e.g., velocity, pressure, and airflow); energy performance (e.g., current, voltage, and power draw); whole building diagnostics (e.g., blower door and duct blaster); and indoor air quality (e.g., tracer gas techniques for air exchange, particle measurements, and gas measurements). Course combines lectures and field measurements in buildings on campus.

**Prerequisite(s):** [(CAE 513)]

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 555****Transportation Systems Evaluation**

Concepts and principles of transportation economic analysis, transportation costs and benefits, user and nonuser consequences, needs studies, finance and taxation, methods for evaluation of plans and projects, cost-efficiency, cost-effectiveness, environmental impact assessment, and economic development assessment.

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 556****Net Zero Energy Home Design Competition I**

This is a project-based course in which students will compete in the Department of Energy's annual Race to Zero home design competition. The goal is for an interdisciplinary team of students to design and provide full documentation for a home that meets the Department of Energy's Zero Energy Ready Home Requirements. Teams are expected to effectively and affordably integrate principles of building science, construction engineering and management, economic analysis, and architectural design in an integrated design process. Teams will be required to submit full sets of plans, drawings, renderings, construction details, and analyses for energy efficiency, costs, and affordability. The competition is designed to provide the next generation of architects, engineers, construction managers, and entrepreneurs with skills and experience to start careers in clean energy and generate creative solutions to real-world problems. CAE 556 is the first course in a two-course series. CAE 556 focuses on aspects of the building design. Priority is given to Architectural Engineering and Architecture majors.

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 557****Net Zero Energy Home Design Competition II**

This is a project-based course in which students will compete in the Department of Energy's annual Race to Zero home design competition. The goal is for an interdisciplinary team of students to design and provide full documentation for a home that meets the Department of Energy's Zero Energy Ready Home Requirements. Teams are expected to effectively and affordably integrate principles of building science, construction engineering and management, economic analysis, and architectural design in an integrated design process. Teams will be required to submit full sets of plans, drawings, renderings, construction details, and analyses for energy efficiency, costs, and affordability. The competition is designed to provide the next generation of architects, engineers, construction managers, and entrepreneurs with skills and experience to start careers in clean energy and generate creative solutions to real-world problems. CAE 557 is the second course of a two-course series. CAE 557 focuses on the final project reporting and submission. Priority is given to Architectural Engineering and Architecture majors.

**Prerequisite(s):** [(CAE 556 with min. grade of C)]

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 560****Plastic Methods**

Fundamental concepts of plasticity in the design of steel structures. Principle of plastic hinges. Upper and lower-bound theorems. Alternating plasticity and incremental collapse. Analysis and design of single story and multi-story framed structures.

**Prerequisite(s):** [(CAE 431\* and CAE 503\*)]An asterisk (\*) designates a course which may be taken concurrently.

**Lecture:** 4 **Lab:** 0 **Credits:** 4

**CAE 561****Structural Reliability and Probabilistic Bases of Design**

Fundamentals of probability theory and stochastic processes; statistical analysis of engineering data; probabilistic modeling of structural loads and material properties. Reliability analysis and design of structure, reliability-based design criteria. Evaluation of existing design codes. Safety analysis of structures under fatigue loads. Fault and event tree analysis.

**Prerequisite(s):** [(CAE 307)]

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 562****Engineering Behavior of Soil**

Soil mineralogy and soil fabric, soil-water electrolyte system, dispersive clay, stress and strain analyses, elastic equilibrium in soil masses, plastic equilibrium in soil masses, in situ and laboratory stress paths, shear strength of sands and clays, thermal properties of soils, critical state soil mechanics principles, nonlinear pseudo elastic and elastoplastic constitutive models.

**Prerequisite(s):** [(CAE 323)]

**Lecture:** 4 **Lab:** 0 **Credits:** 4

**CAE 563****Advanced Soil Mechanics Laboratory**

Advanced aspects of soil property measurement with application to design and analysis, system characteristics on soil sediment, pinhole test for identifying dispersive clays, consolidation, triaxial compression and triaxial extension with porewater measurement, cyclic triaxial test, permeability with back pressure, determination of critical void ratio.

**Prerequisite(s):** [(CAE 323)]AND[(CAE 562\*)]An asterisk (\*) designates a course which may be taken concurrently.

**Lecture:** 1 **Lab:** 3 **Credits:** 1

**CAE 564****Design of Foundations, Embankments and Earth Structures**

Consolidation phenomena, derivation of bearing capacity equations, beams and slabs on soils, piles and pile groups, compaction, earth pressure theories and pressure in embankment, slope stability analyses, retaining structures, embankment design, soil structure interaction during excavation, design of anchors for landslide stabilization and retaining structures and instrumentation.

**Prerequisite(s):** [(CAE 323)]AND[(CAE 457 with min. grade of C)]

**Lecture:** 4 **Lab:** 0 **Credits:** 4

**CAE 565****Rock Mechanics and Tunneling**

Rock classification for engineering purposes, mechanical behavior of rocks, in situ stresses in rock, stresses around underground openings, rock slope engineering, design of underground structures, design of deep support excavation and tunnels, primary and secondary linings of tunnels, mined shafts, instrumentation.

**Prerequisite(s):** [(CAE 457)]

**Lecture:** 4 **Lab:** 0 **Credits:** 4

**CAE 566****Earthquake Engineering and Soil Dynamics**

Earthquakes and their intensity, influence of group motion, review of I-DOF and M-DOF systems, wave propagation theories, vibration due to blast and shock waves, design earthquake motion, dynamic properties of soils, soil liquefaction, bearing capacity during earthquakes and design of machine foundations, isolation of foundations, pile foundation, and dynamic analysis, earth pressure during earthquakes on retaining structures and embankment.

**Prerequisite(s):** [(CAE 323)]AND[(CAE 420)]

**Lecture:** 4 **Lab:** 0 **Credits:** 4

**CAE 568****Transportation Asset Management**

Processes and techniques for managing the preservation and expansion of highway transportation facilities such as pavements, bridges, and traffic control and safety hardware; system usage concerning mobility, safety and security, energy consumption, and vehicle emissions; and economic development impacts. Five component management systems are first examined: pavements, bridges, traffic control and safety hardware, roadway maintenance, safety, and congestion. Finally, the methodology for overall transportation asset management is discussed. The primary emphasis is on data collection, database management, performance modeling, needs assessment, project evaluation, project selection, program development strategies, risk and uncertainty modeling, and institutional issues.

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 570****Legal Issues in Civil Engineering**

This course introduces students to the legal aspects of engineering and construction, contract documents, and contract clauses. Upon completion of this course, students will be able to do the following: (1) identify the elements of contract formation; (2) interpret contract clauses; (3) explain the rights and duties of the parties involved in design and construction; and (4) evaluate changes and their root causes. Students will also be able to objectively identify and analyze legal liabilities and the expected professional standard of architects, engineers, and contractors.

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 571****Lean Construction and Control**

This course introduces students to lean principles and the lean project delivery system (LPDS) applied to the construction industry. Lean construction and lean project delivery embrace concepts and techniques originally conceived in the automobile manufacturing industry and adopted by the construction industry. In the manufacturing sector, lean production has revolutionized product manufacturing, resulting in significant gains in plant productivity, reliability, and reductions in defects. Specific concepts that will be covered in this course include Plan-Do-Check-Act continuous improvement, A3 reporting, value stream mapping, pull systems and pull planning, kanban, 5S, standardization, and the Choosing by Advantages Decisionmaking System.

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 572****Construction Cost Accounting and Control**

Review of basic accounting principles and techniques--purchasing, accounts payable, invoicing, accounts receivable, general ledger, payrolls and indirect costs. Job costing and budgeting. Recording and reporting procedures in construction projects--invoices, subcontractor applications for payment, labor time cards, unit completion reports, change orders. Cost coding systems for construction activities. Variance reporting procedures. Project closeout. Class exercise using computer program.

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 573****Construction Management with Building Information Modeling**

Fundamentals and practical use of information technologies in the construction industry; basic concepts of building information modeling (BIM); review of software and technology available for BIM; practical use of BIM including design and clash detection; impact of BIM on construction management functions; construction scheduling and sequencing using BIM; cost estimating using BIM; facility management with BIM; integrated approach to navigate BIM as a multi-disciplinary design, analysis, construction, and facility management technology; class exercise to create a BIM model and to use it in scheduling, sequencing, cost estimating, management, and simulation of a construction project.

**Lecture:** 3 **Lab:** 0 **Credits:** 3

**CAE 574****Economic Decision Analysis in Civil Engineering**

Basic economic concepts including interest calculations, economic comparison of alternatives, replacement decisions, depreciation and depletion, tax considerations, and sensitivity analysis. Evaluation of public projects, the effect of inflation, decision making under risk and/or uncertainty, economic decision models. Case studies from the construction industry.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 575****Systems Analysis in Civil Engineering**

Management and system concepts, linear programming, graphical methods, Simplex, two-phase Simplex, the transportation problem, the assignment problem, integer programming, and sensitivity analysis. System modeling by activity networks; maximal-low flow, longest-path and shortest-path analyses, flow graphs, decision-tree analysis, stochastic-network modeling, queuing systems, and analysis of inventory systems. Case studies from the construction industry.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 577****Construction Equipment Management**

Factors affecting the selection of construction equipment. Descriptions, operating methods, production rates, unit costs related to excavating equipment. Power shovels, draglines, clam shells, and trenching machines. Engineering fundamentals. Moving construction equipment, including trucks, wagons, scrapers, dozers, soil-stabilization and compaction equipment. Belt conveyors, compaction and drilling equipment, pile driving equipment, pumps and crushers.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 578****Construction Claims Management**

This course provides a basic explanation of construction contract claims by types such as delays, acceleration, and scope issues, the underlying legal theories of the contract construction and claims, elements required for each claims type defenses to the claim, prophylactic claims measures. The claims process within the contract and extra-contractual basis's for claims are examined. Resolution of claims by ADR techniques and the formal litigation process are explained. AIA, AGC, and federal claims provisions are described. In addition to construction contract claims other types of claims associated with construction projects are covered such as Surety bond claims and various insurance claims (CGL, Builder's Risk, workers comp, etc)

**Prerequisite(s):** [(CAE 473)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 579****Real Estate Fundamentals for Engineers and Architects**

The objective of this course is to introduce civil engineering students to the real estate process. Students will learn techniques and methodologies for evaluating real estate investment opportunities using engineering economic analysis principles. Students will use Time Value of Money analysis for evaluating real estate transactions, including how to carry out calculations using formulas, financial calculators, and spreadsheets. This course will help civil engineering students learn financial skills that can be applied to professional and personal investment decisions.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 580****Intelligent Transportation Systems**

The concept of intelligent transportation systems (ITS) involves the use of rapidly emerging information and communication technologies in mitigating congestion and attendant problems. A substantial amount of research and development activities have taken place over the last few decades. This course will provide an introduction to the various aspects of ITS and will focus on ITS planning, technology, big data analysis, and evaluation. In addition, such topics as deployment, financing, and management are also discussed. The course will include guest lectures and possibly field visits.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 581****Algorithms in Transportation**

Modeling and analysis of transportation network problems through the design, analysis, and implementation of algorithms. Emphasis on the use of quantitative and qualitative methods of operations research to model system performance. Covers fundamental data structures, complexity analysis, memory management, recursive programs, application of graph theory, and network analysis to transportation problems, analytical formulations, and solution algorithms for origin-destination estimation, static and dynamic traffic assignments, and transportation resource allocation.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 582****Structural Wind and Earthquake Engineering**

Introduction to nature of wind, aerodynamic wind-loading and design. Strong ground motion phenomenon. Investigation of the response of structures to dynamic and pseudo dynamic wind, earthquake, shock waves and other deterministic and probabilistic loadings. Design criteria for buildings and nuclear power stations, special topics in lifeline earthquake engineering.

**Prerequisite(s):** [(CAE 529)]

**Lecture: 4 Lab: 0 Credits: 4**

**CAE 583****Performance-Based Structural and Seismic Design of Buildings and Bridges**

This course covers performance-based structural and seismic design (PBSSD) for buildings and bridges. The course will begin with brief reviewing and critical discussion on conventional code-based seismic design followed by the development of the concept and applicability of this new alternative and advanced PBSSD. Computer methods in linear dynamic, nonlinear static, and dynamic analyses will be surveyed and discussed as primary tools in PBSSD. Ample case studies from real-world projects are carried out throughout the course. These case studies include the PBSSD of special structures, tall buildings, and those that building code-based design is not applicable.

**Prerequisite(s):** [(CAE 529)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 584****Stormwater Management**

Basic principles of storm water management; hydrology and hydraulics of excess water; excess water management and design; sewer system design and management, storm water detention systems; flood plain system design; risk based design of drainage systems; practical and case study problems.

**Prerequisite(s):** [(CAE 301)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 586****Seismic Design of Building and Bridge Structures**

The course covers six topics, as listed in the course outline, on seismic design of steel and R/C building structures and bridges. In addition to offer fundamentals and experiences in seismic design through design examples, it is also assumed that structural engineers who are preparing for their Structural Engineer License Exam might find extremely helpful.

**Prerequisite(s):** [(CAE 431 and CAE 432)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 589****Groundwater Hydrology and Sampling**

Groundwater geology and flow, response of ideal aquifer to pumping. Chemical properties and principles including source of contamination and estimation of saturated hydraulic conductivity. Principles of exploration and sampling, methods of subsurface explorations, groundwater observation techniques. Instructor permission required.

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 590****Geotechnical Landfill Design and Maintenance**

Regulatory and legal issues, site selection and assessment, geotechnical-subsurface investigation, clay mineralogy and clay-water-electrolyte system, linear and leachate-control-systems design, stability of landfill slopes, cover design, construction and operation, final use and remediation design.

**Prerequisite(s):** [(CAE 323)]

**Lecture: 3 Lab: 0 Credits: 3**

**CAE 591****Research and Thesis for M.S. Degree**

Research and Thesis for M.S. Degree.

**Credit: Variable**

**CAE 593****Civil Engineering Seminar**

Reports on current research. Graduate students are expected to register and attend.

**Lecture: 0 Lab: 0 Credits: 0**

**CAE 594****Research Problems**

**Credit: Variable**

**CAE 597****Special Problems**

Graduate course work in the problem subject matter. Subject matter will vary with the interests and background of students and instructor. Design or research problems may be assigned from the areas of architectural, construction, geotechnical, geoenvironmental, structural, or transportation engineering.

**Credit: Variable**

**CAE 598****Special Topics**

A special topic in civil or architectural engineering at the graduate level.

**Credit: Variable**

**CAE 599****Graduate Workshop**

Graduate workshop.

**Lecture: 0 Lab: 0 Credits: 0**

**CAE 691****Research and Thesis for Ph.D. Degree**

Research and Thesis for Ph.D. degree.

**Credit: Variable**

**CAE 724****Introduction to Acoustics**

This short course provides a brief introduction to the fundamentals of acoustics and the application to product noise prediction and reduction. The first part focuses on fundamentals of acoustics and noise generation. The second part of the course focuses on applied noise control.

**Lecture: 2 Lab: 0 Credits: 2**
