OFFICE OF DIGITAL LEARNING

The Office of Digital Learning, formerly IIT Online, is the bridge between academics and technology at Illinois Institute of Technology. Its core mission is to work with faculty to promote active learning in face-to-face, blended, or online courses. The Office of Digital Learning uses instructional design principles and educational technology to partner with faculty and create enriching learning experiences to improve learning outcomes for all Illinois Tech students. Support touches all facets of student academic experiences from initial instructional design and pedagogy to production and delivery of course content, management of exams for remote students, and more. The Office of Digital Learning also administers online courses and programs.

Blackboard Learn

Illinois Tech uses Blackboard Learn as its learning management system (LMS). The Office of Digital Learning manages day-to-day operations of Blackboard and provides faculty training and support. Students with questions about Blackboard Learn and its features should contact the Support Desk. Every course at Illinois Tech has an electronic course shell. The majority of Illinois Tech faculty do utilize Blackboard and at the very least tend to post their course syllabus in the course shell. However, a few academic units or faculty may choose not to use the LMS or a specific feature, as utilization in a particular course or course shell is entirely dependent upon the department or instructor teaching that particular course.

Online Courses and Programs

The Office of Digital Learning supports departments in the design, delivery, and administration of Illinois Tech online courses and programs. For specific details regarding a particular online course or program, the best source of information will always be the department which offers the particular course or program.

Prospective students who wish to take online courses or programs must first be admitted to a degree, certificate, or professional development program. Students in online courses or programs are Illinois Institute of Technology students and are subject to the same policies and procedures as on-campus students in face-to-face courses.

Most online programs and courses are at the graduate level. Courses follow the same 16-week semester as the university academic calendar. Courses typically have the same faculty and follow the same syllabus. Course structure and delivery vary depending on the instructor. In many cases, online course content is created using recorded lectures of the corresponding face-to-face course. Recordings are typically made available in Blackboard within a few hours of the face-to-face session. Online and face-to-face course sections may share a Blackboard course shell, yet the sections are distinct: students enrolled in online sections are not counted when considering room assignments for courses or exams. If a course holds exams, exams follow the same university exam schedule. Exams are coordinated through the Office of Digital Learning. Proctored exams are typically administered at local testing centers or online. Students are responsible for any additional third party fees associated with taking exams online or at testing centers. Such fees may vary widely depending on the provider selected.
