FOOD SCIENCE AND NUTRITION (FDSN)

FDSN 501
Nutrition, Metabolism, and Health
Study of chemical structures, types, and metabolism of carbohydrates, lipids, and proteins. Discussion of the biological and chemical roles of vitamins and minerals. Application and integration of metabolic knowledge with health promotion and chronic disease.
Lecture: 3 Lab: 0 Credits: 3

FDSN 502
Development, Delivery, and Dissemination
This course is an introduction to writing and presenting on scientific research with a focus on skills necessary for research at IIT’s Institute for Food Safety and Health. Topics will include defining a problem, structuring a literature review, creating a research proposal, and written and oral presentation of research results.
Lecture: 3 Lab: 0 Credits: 3

FDSN 504
Food Biotechnology
Introduction of biotechnology in the food industry including genetic engineering of microorganisms. Fundamentals of microbial genomics and proteomics. Practice of a variety of software and bioinformatics tools including database search, sequence alignment, phylogenetic and cluster analyses, gene production, genomic map construction, and structural and functional prediction of proteins. Applications of DNA fingerprinting techniques in food safety and public health.
Lecture: 3 Lab: 0 Credits: 3

FDSN 505
Food Microbiology
Lecture: 3 Lab: 0 Credits: 3

FDSN 506
Food Microbiology Laboratory
Lecture: 0 Lab: 3 Credits: 3

FDSN 507
Food Analysis
Techniques for analyzing food toxins, food constituents of public health concern, intentional and unintentional food additives, modern separation and analytic techniques.
Lecture: 3 Lab: 0 Credits: 3

FDSN 508
Food Product Development
Students in this class will learn how to do the following: identify the key steps in the food product development process and stage gate concepts; develop a formulation approach with ability to effectively understand how to work well with vendors, handle labeling regulations, food safety, and consumer acceptability requirements; create a product unit costing with trade-offs and contingencies for market launch; identify key performance requirements for product shelf life testing and packaging specifications; evaluate product quality and safety with traditional and state of the art assessment tools; how to conduct consumer tests, plant trials, and introduce new products and processes into the manufacturing operation and contingency planning; and develop a strategy to monitor and improve product performance.
Lecture: 3 Lab: 0 Credits: 3

FDSN 509
Fundamentals of Biostatistics and Epidemiology in Food Science and Nutrition
This course covers fundamental concepts in biostatistics and epidemiology with an emphasis on applications to food science, food safety, and nutrition. The course will emphasize study designs and epidemiologic and statistical methods used to investigate the relationships between health-related variables with particular attention to food-related exposures in health and disease.
Corequisite(s): FDSN 510
Lecture: 3 Lab: 0 Credits: 3

FDSN 510
Fundamentals of Biostatistics and Epidemiology Laboratory in Food Science and Nutrition
This laboratory course covers fundamental concepts in biostatistics and epidemiology with an emphasis on applications to food safety and nutrition. The course will emphasize study designs and epidemiologic and statistical methods used to investigate the relationships between health-related variables with particular attention to food-related exposures in health and disease. Self-directed course.
Corequisite(s): FDSN 509
Lecture: 0 Lab: 2 Credits: 1

FDSN 511
Food Law and Regulations
Legal and scientific issues in regulating the nation’s food supply and nutritional status. Roles of regulatory agencies; Federal Food, Drug and Cosmetic Act; definitions and standards for food and adulterated foods. Manufacturing processed foods in compliance with regulations.
Lecture: 3 Lab: 0 Credits: 3
FDSN 519  
Food Process Engineering Lab  
This course provides hands on experience to students on various unit operations. Students will be exposed to heat and mass transfer in food processing, fluid flow, preservation processes, cooling, freezing, freeze drying, thermometry and alternative methods of food processing.  
Lecture: 0  Lab: 3  Credits: 3  

FDSN 520  
Low-Acid Canned Food Regulations and Microbiology  
Regulatory requirements for the U. S. Food and Drug Administration and the broad microbial issues associated with low-acid canned foods (LACF) products. Topics will include the U. S. Food Drug & Cosmetic (FD&C) Act, Emergency Permit Control, 21 Code of Federal Register (CFR) parts 108, 113, and 114, record requirements, sources of microbial contamination, characteristics of clostridium botulinum, mesosphelic sporeformers, indicator organisms, and introduction to microbial heat resistance.  
Lecture: 3  Lab: 0  Credits: 3  

FDSN 521  
Food Process Engineering  
Food engineering fundamentals, heat transfer in food processing, food rheology, freezing of foods, food dehydration, kinetics of chemical reactions in foods, refrigeration and thermal process calculations, and alternative methods of food processing.  
Lecture: 3  Lab: 0  Credits: 3  

FDSN 522  
Advanced Food Process Engineering  
Process calculations for food processing methods such as canning, aseptic processing, ohmic heating, microwave processing and pulsed energy processing. Extrusion techniques in food processing. Discussion of new food processing techniques and safety implications.  
Lecture: 3  Lab: 0  Credits: 3  

FDSN 523  
Food Engineering Process Delivery  
Requirements for the U. S. Food and Drug Administration food canning regulations, including system design, process establishment, operational, and inspection records. Operations and calibration requirements of thermal processing equipment. Process design, documentation of process deviation, and calculation of process delivery.  
Prerequisite(s): FDSN 522 with min. grade of C  
Lecture: 3  Lab: 0  Credits: 3  

FDSN 524  
Fundamentals of Food Science  
This course will cover the central food science issues encountered with storage and processing of all major American food commodities including meats, grains, confections, vegetables, eggs, and dairy. It will also review the relevant chemistry, physics, and engineering required to understand common food-related unit operations such as drying, freezing, sterilization, and radiation treatment of foods. An introduction to microbial and chemical issues of food quality and safety will also be covered.  
Lecture: 3  Lab: 0  Credits: 3  

FDSN 526  
Engineering Principles of Food  
Methods for conducting seal integrity examinations, spoilage diagnosis, and traceability, defining and classifying package defects. Types of packaging materials, including metal, glass, plastics, flexible and composite containers, and their closure and sealing systems. Aseptic and alternative process delivery systems.  
Lecture: 3  Lab: 0  Credits: 3  

FDSN 531  
HACCP Planning and Implementation  
Examination of the Hazard Analysis and Critical Control Point (HACCP) principles; microbiological and process overviews; generic HACCP models, Good Manufacturing Practices (GMP); monitoring of critical control points (CCPs), process control and implementation.  
Lecture: 3  Lab: 0  Credits: 3  

FDSN 541  
Principles of Food Packaging  
Type and application of packaging materials. Migration theories and food package interaction, package testing to ensure safety, and recycling of package materials.  
Lecture: 3  Lab: 0  Credits: 3  

FDSN 591  
Research and Thesis  
Research and Thesis for Master of Science Degree students.  
Credit: Variable  

FDSN 593  
Seminar on Food Safety and Technology  
Students attend seminars offered during the semester. Each student is also required to give a 30 minute presentation on a topic of his/her interest or a research project on which she/he has worked.  
Lecture: 0  Lab: 1  Credits: 1  

FDSN 594  
Special Projects  
Advanced projects in food processing and packaging, food microbiology and safety, food chemistry, and nutrition.  
Credit: Variable  

FDSN 597  
Special Problems  
Independent study of advanced topics in food science and nutrition including food processing and packaging, food microbiology and safety, food chemistry, and nutrition.  
Credit: Variable  

FDSN 600  
Continuing of Residence  
Continuing of residence.  
Lecture: 0  Lab: 1  Credits: 1
FDSN 610
Advanced Topics in Food Microbiology
This course is an advanced course in food safety microbiology covering the latest development and trends in food safety related microbiology, including emerging foodborne pathogens of public health significance, as well as the use of the latest technologies for the detection and control of these microbial food safety hazards. This course can be used as credits towards candidature for a Ph.D. degree in Food Safety and Technology/Food Science and Nutrition.
Lecture: 2 Lab: 0 Credits: 2

FDSN 620
Advanced Topics in Food Chemistry
This course can be used as credits towards candidature for a Ph.D. degree in Food Science and Nutrition. This course is expected to cover advanced knowledge in the chemistry of the components of foods, their physiochemical properties and chemical interactions, and the chemical changes that occur during processing, storage, and packaging. Students are expected to work on evidence derived from original research literature, interpretation of research findings, and problem solving based on the scientific principles of food chemistry. This advanced program is open to individuals who hold undergraduate degrees in chemistry, food science, or related disciplines. Students who have completed the FDSN 524 Fundamentals of Food Science and Technology and FDSN 507 Food Analysis courses with a B or higher may also apply. Upon successful completion of this course, students are expected to be able to translate theory and research into practice.
Lecture: 2 Lab: 0 Credits: 2

FDSN 630
Advanced Topics in Nutrition
This course can be used as credits towards candidature for a Ph.D. degree in Food Science and Nutrition. This course is expected to cover advanced knowledge in nutrition, metabolism, disease prevention and health promotion. This advanced program is open to individuals who hold undergraduate degrees in nutritional science, food science, health science, biology, biochemistry, chemistry or related disciplines. Students who have completed the FDSN 501 course with a B or higher may also apply. Upon successful completion of this course, students are expected to be able to translate theory and research into practice.
Lecture: 2 Lab: 0 Credits: 2

FDSN 640
Advanced Topics in Food Process Engineering
This course covers recent advancements and developments in food engineering and food processing including novel and emerging processing technologies, advanced thermal process calculations, modeling, simulation, sustainable food processing, process controls & automation and kinetics of food transformations, energy reduction, and food rheology. This course can be used towards candidature for a Ph.D. degree in Food Safety and Technology/Food Science and Nutrition.
Lecture: 2 Lab: 0 Credits: 2

FDSN 691
Research and Thesis
Research and Thesis for Ph.D. Food Science Candidates.
Credit: Variable
