Mission
The mission of the biomedical engineering undergraduate program is to educate students in the fundamentals of biomedical engineering. This foundation consists of a broad exposure to the chemical, mathematical, physical, and biological sciences, coupled with the appropriate technical and engineering skills to be able to fill diverse professional roles in industry, graduate school, and the medical professions.

Biomedical Engineering at Illinois Institute of Technology
Biomedical engineering is an interdisciplinary major in which the principles and tools of traditional engineering fields such as mechanical, materials, electrical, and chemical engineering are integrated with the chemical, physical, and biological sciences. Together, they are applied towards a better understanding of physiological processes in humans or towards the solution of medical problems. Engineering will continue to play an increasingly important role in advancing medical treatment, developing biotechnology, and improving healthcare delivery. By its very nature, biomedical engineering is expansive and requires a broad and integrated foundation in the physical, chemical, mathematical, and biological sciences.

Program Outcomes and Objectives
At the undergraduate level, the department offers a four-year engineering curriculum leading to a Bachelor of Science (B.S.) in Biomedical Engineering.

Our students will attain the following outcomes by the time of their graduation:

• An ability to apply knowledge of mathematics, science, and engineering
• An ability to design and conduct experiments, as well as to analyze and interpret data
• An ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
• An ability to function on multi-disciplinary teams
• An ability to identify, formulate, and solve engineering problems
• An understanding of professional and ethical responsibility
• An ability to communicate effectively
• The broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
• A recognition of the need for and an ability to engage in life-long learning
• A knowledge of contemporary issues
• An ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

The program educational objectives for the BME program are:

• Graduates will meet the expectations of employers of biomedical engineers
• Qualified graduates will pursue advanced study if they so desire
• Graduates will assume/undertake leadership roles in their professions

Areas of Specialization (Tracks)
The biomedical engineering program has three areas of specialization (or tracks): cell and tissue engineering, medical imaging, and neural engineering. While distinct in their concept, these areas share core exposure to the physical, chemical, biological, and engineering sciences. Thus, there is potential for considerable crossover among the areas at the upper-division level. This is indicated by the track course options.
Medical School Admission
For information regarding admission to medical schools, please visit iit.edu/pre-health-pre-med.

Degree Programs
• Bachelor of Science in Biomedical Engineering: Cell and Tissue Engineering Track
• Bachelor of Science in Biomedical Engineering: Medical Imaging Track
• Bachelor of Science in Biomedical Engineering: Neural Engineering Track

Co-Terminal Options
The Department of Biomedical Engineering also offers the following co-terminal degrees, which enables a student to simultaneously complete both an undergraduate and graduate degree in as few as five years:

• Bachelor of Science in Biomedical Engineering/Master of Biomedical Imaging and Signals
• Bachelor of Science in Biomedical Engineering/Master of Chemical Engineering
• Bachelor of Science in Biomedical Engineering/Master of Science in Biology for the Health Professions

These co-terminal degrees allow students to gain greater knowledge in specialized areas while, in most cases, completing a smaller number of credit hours with increased scheduling flexibility. For more information, please visit the Department of Biomedical Engineering website (engineering.iit.edu/bme).

Course Descriptions
BME 100
Introduction to the Profession
Introduces the student to the scope of the biomedical engineering profession and its role in society, and develops a sense of professionalism in the student. Provides an overview of biomedical engineering through lectures, presentations by outside speakers, hands-on exercises, and scientific literature analyses. Develops professional communication and teamwork skills.
Lecture: 1 Lab: 2 Credits: 2
Satisfies: Communications (C)

BME 200
Biomedical Engineering Computer Applications
In this course, students will apply programming to solve quantitative biomedical engineering problems across cell/tissue engineering, neural engineering, and medical imaging. Students will also be exposed to additional engineering and product development programming tools and environments.
Prerequisite(s): MATH 252* and CS 104, An asterisk (*) designates a course which may be taken concurrently.
Lecture: 1 Lab: 2 Credits: 2

BME 301
Bio-Fluid Mechanics
Basic properties of fluids in motion. Lagrangian and Eulerian viewpoints, material derivative, streamlines. Continuity, energy, angular and linear momentum equations in integral and differential forms. Applications in biofluids and biomedical devices; rheology of biological fluids.
Corequisite(s): BME 320
Prerequisite(s): MATH 251 and MMAE 200 and BIOL 115
Lecture: 3 Lab: 0 Credits: 3

BME 309
Biomedical Imaging
An introduction to biomedical imaging concepts and modalities. Topics covered include general principles of image science (image quality, sampling, etc.), X-ray-based imaging (conventional x-ray imaging, mammography, computed tomography (CT), and digital subtraction angiography (DSA)), and nuclear medicine (gamma camera, single photon emission computed tomography (SPECT), and positron emission tomography (PET)).
Prerequisite(s): (BME 330* or ECE 308*) and PHYS 221, An asterisk (*) designates a course which may be taken concurrently.
Lecture: 3 Lab: 0 Credits: 3

BME 310
Biomaterials
Applications of biomaterials in different tissue and organ systems. Relationship between physical and chemical structure of materials and biological system response. Choosing, fabricating, and modifying materials for specific biomedical applications.
Prerequisite(s): CHEM 125 and PHYS 123
Lecture: 3 Lab: 0 Credits: 3
Satisfies: Communications (C)

BME 315
Instrumentation and Measurement Laboratory
Laboratory exercises stress instrumentation usage and data analysis used to determine physiological functions and variables and the relations to the physiological variability.
Prerequisite(s): ECE 211* and BME 200*, An asterisk (*) designates a course which may be taken concurrently.
Lecture: 0 Lab: 3 Credits: 1
BME 320
Fluids Laboratory
Laboratory experiments in thermodynamics, biological fluid flow, and heat transfer. Emphasis is placed on current methods, instrumentation, and equipment used in biomedical engineering; oral presentation of results; and on the writing of comprehensive reports. Open only to Biomedical Engineering majors.
Prerequisite(s): BME 301
Corequisite(s): BIOL 117 and BME 315
Lecture: 0 Lab: 3 Credits: 1
Satisfies: Communications (C)

BME 325
Bioelectronics Laboratory
Practical hands on design, construction and testing of electric and electronic circuitry for biomedical applications. Basic concepts will be presented with emphasis on their relevance to the design of systems that can be used for clinical and basic scientific research.
Prerequisite(s): ECE 213* and BME 315, An asterisk (*) designates a course which may be taken concurrently.
Lecture: 0 Lab: 3 Credits: 1

BME 330
Analysis of Biosignals and Systems
This course is a junior level introduction to the theoretical and practical aspects of signal processing and dynamic systems behavior as they relate to physiological, biological, and biomedical systems. The topics covered will include sampling theory, continuous and discrete Fourier transforms and series, Laplace transforms, Linear systems theory, signal filtering, models of biological and physiological systems, and analysis of dynamic and feedback systems.
Prerequisite(s): ECE 211 and MATH 252
Lecture: 3 Lab: 0 Credits: 3

BME 331
Modeling and Control of Biological Systems
The course expands upon the systems and signal processing concepts introduced in BME 330 to develop the tools to model physiological processes and the feedback control of these processes.
Prerequisite(s): (BME 330 or ECE 308) and BME 422
Lecture: 3 Lab: 0 Credits: 3

BME 335
Thermodynamics of Living Systems
Principles of thermodynamics and conservation of mass applied to living systems and biomedical devices. The first and second laws of thermodynamics, pHs and chemical equilibrium, metabolic stoichiometry and energetics.
Prerequisite(s): MATH 251 and CHE 202
Lecture: 3 Lab: 0 Credits: 3

BME 336
Reaction Kinetics for BME
This course focuses on analysis of rate data and single and multiple reaction schemes. Biomedical topics include biological systems, enzymatic pathways, enzyme and receptor-ligand kinetics, pharmacokinetics, heterogeneous reactions, microbial cell growth and product formation, and the design and analysis of biological reactors.
Prerequisite(s): BIOL 403 and MATH 252 and BME 335
Lecture: 3 Lab: 0 Credits: 3

BME 402
Introduction to Regulatory Science for Engineers
Engineers must be equipped to answer the growing demands for new medical technologies. Introduction to Regulatory Science teaches engineers how the regulated environment impacts the design, testing, and delivery of medical devices. It will equip students with the essential skills and tools critical to the practice of engineering in the medical device industry. In this course, students will be exposed to the core concepts, processes, and tools surrounding the global medical device regulatory framework, and will gain foundational knowledge for the practical application of regulations throughout the product development lifecycle. From knowledge gained in the class, students will be expected to work in teams and use critical thinking, data analysis and interpretation skills to research, evaluate, and present a scientific, technical, and legally justifiable approach for the global introduction of a new medical device.
Lecture: 3 Lab: 0 Credits: 3

BME 405
Physiology Laboratory
A laboratory course which demonstrates basic concepts of bioengineering design through experimental procedures involving humans and experimental animals. Statistical principles of experimental design. Study of possible errors. Experiments include nerve action, electrocardiography, mechanics of muscle, membranes, and noninvasive diagnostics in humans. Open only to Biomedical Engineering majors.
Corequisite(s): BME 453
Prerequisite(s): BME 315 or Graduate standing
Lecture: 0 Lab: 3 Credits: 1

BME 417
Technologies for Treatment of Diabetes
Study of physiological control systems and engineering of external control of biological systems by focusing on an endocrine system disorder – diabetes. The effects of type 1 diabetes on glucose homeostasis and various treatment technologies for regulation of glucose concentration. Development of mathematical models describing the dynamics of glucose and insulin concentration variations, blood glucose concentration measurement and inference techniques, insulin pumps, and artificial pancreas systems.
Lecture: 3 Lab: 0 Credits: 3

BME 418
Reaction Kinetics for BME
This course focuses on analysis of rate data and single and multiple reaction schemes. Biomedical topics include biological systems, enzymatic pathways, enzyme and receptor-ligand kinetics, pharmacokinetics, heterogeneous reactions, microbial cell growth and product formation, and the design and analysis of biological reactors.
Prerequisite(s): BIOL 403 and MATH 252 and BME 335
Lecture: 3 Lab: 0 Credits: 3
BME 419  
Introduction to Design Concepts in Biomedical Engineering  
This course aims to educate students on project definition, and on the design, development and technology transfer of potential biomedical products in the context of the student's major capstone project. Students will learn best practices for designing a marketable medical device, including the design process from the clinical problem definition through prototype and clinical testing to market readiness.  
Prerequisite(s): BME 320 or BME 325  
Lecture: 2 Lab: 0 Credits: 2  
Satisfies: Communications (C)

BME 420  
Design Concepts in Biomedical Engineering  
An introduction to the strategies and fundamental bioengineering design criteria behind the development of biomedical engineering systems and implantable devices that use either synthetic materials or hybrid (biological-synthetic) systems. Analysis and design of replacements for the heart, kidneys, and lungs. Specification and realization of structures for artificial organ systems. Students will be required to complete a team-oriented design project in their chosen track.  
Prerequisite(s): BME 419  
Lecture: 3 Lab: 0 Credits: 3  
Satisfies: Communications (C)

BME 422  
Mathematical Methods for Biomedical Engineers  
This course integrates mathematical and computational tools that address directly the needs of biomedical engineers. The topics covered include the mathematics of diffusion, pharmacokinetic models, biological fluid mechanics, and biosignal representations and analysis. The use of MATLAB will be emphasized for numerically solving problems of practical relevance.  
Prerequisite(s): (MATH 252 and CS 104) or Graduate standing and (BME 330* or ECE 308*). An asterisk (*) designates a course which may be taken concurrently.  
Lecture: 3 Lab: 0 Credits: 3

BME 423  
Cell Biomechanics: Principles and Biological Processes  
This course will provide students an opportunity to learn about mechanical forces that develop in the human body and how they can influence cell functions in a range of biological processes from embryogenesis, wound healing, and regenerative medicine to pathological conditions such as cancer invasion. Examples of research methods for investigating cell biomechanics in various biological systems will be discussed.  
Prerequisite(s): BME 301  
Lecture: 3 Lab: 0 Credits: 3

BME 424  
Quantitative Aspects of Cell and Tissue Engineering  
This course is designed to cover fundamentals of cell and tissue engineering from a quantitative perspective. Topics addressed include elements of tissue development, cell growth and differentiation, cell adhesion, migration, molecular and cellular transport in tissues and polymeric hydrogels for tissue engineering and drug delivery applications.  
Prerequisite(s): BME 482 and BME 418  
Lecture: 3 Lab: 0 Credits: 3

BME 425  
Introduction to Medical Devices, BioMEMS and Microfluidics  
This course will present fundamentals and applications of medical devices, BioMEMS, and microfluidic technologies for applications in the broad health and biomedical engineering. It will provide a broad view of the general field and a knowledge of relevant fabrication methods and analysis techniques. Fabrication and analytical techniques, interfacing with biological materials, and techniques for analyte detection will be emphasized. The course will include individual projects and critical paper reviews in which each student will be encouraged to master basic concepts in design and fabrication for devices for specific applications.  
Lecture: 3 Lab: 0 Credits: 3

BME 427  
Extracellular Matrix Biology  
The Extra Cellular Matrix (ECM) is that which connects cells in tissues and provides much of the organization and support in almost every tissue and/or organ system of the body. Thus the aim of this course is to give students insights into ECM biology and its relevance to modern medicine and biomedical (tissue) engineering. A significant portion of working population is suffering from ECM-related maladies, and the focus of research has shifted into creating ECM implants. The ECM implant market is growing rapidly. For instance, the collagen meniscus implant market was reported to be at $308.6 million in 20181. Understanding the implications of the molecular biology of ECM to feed into this research is highly relevant for students considering careers (academic and industry) in life sciences in industry, academia and healthcare. Extracellular Matrix (ECM) is a highly complex system in mammalian biology responsible for structural support and functional (biochemical) signals for physiology. Specific amino acid sequences on the various ECM elements are responsible to trigger intra- and extracellular cascades leading to cell division, proliferation, tissue regeneration, wound healing and inflammation. This course will focus on the following key concepts: a) Gene expression, structure and function of various ECM proteins and complexes and the physiological processes. b) Etiology and the molecular progression of diseases caused by abnormalities to ECM proteins. c) Mechanobiology of various ECM proteins. d) Structure function and mechanical function of ECM interfaces with other tissues (muscle, bone, skin etc.) e) Implications for tissue engineering and development of novel biomimetic and biological ECM implants.

<td>BME 428</td>
<td>Engineering World Health</td>
<td>This course covers the major types of medical equipment, including the principles of operation, the physiology underlying the measurement, the major functional (system) pieces for each instrument, and typical problems/applications of each instrument. Special focus is placed on making reliable and safe repairs in a low resource setting: Troubleshooting, creative problem solving, calibration and testing. Laboratory sessions will focus on learning hands on and technical knowledge required for completing basic electronic and mechanical repairs. Basic electronics through simple power supply design will be covered. Over the course of the semester, the class will travel to a hospital or training laboratory to troubleshoot and repair medical equipment as a group. Prerequisite(s): MATH 152 and PHYS 221</td>
<td>3</td>
<td>0</td>

BME 452
Control Systems for Biomedical Engineers
Control systems design and analysis in biomedical engineering. Time and frequency domain analysis, impulse vs. step response, open vs. closed loop response, stability, adaptive control, system modeling. Emphasis is on understanding physiological control systems and the engineering of external control of biological systems.
Prerequisite(s): BME 330
Lecture: 3 Lab: 0 Credits: 3

BME 453
Quantitative Physiology
This course provides a quantitative approach to fundamental physiological principles and systems. The course covers basic cell physiology, membrane transport, action potentials and excitable tissue, and skeletomuscular, nervous, cardiovascular, respiratory, renal, and endocrine systems.
Corequisite(s): BME 405
Prerequisite(s): BIOL 115
Lecture: 3 Lab: 0 Credits: 3

BME 455
Cardiovascular Fluid Mechanics
Anatomy of the cardiovascular system. Scaling principles. Lumped parameter, one-dimensional linear and nonlinear wave propagation, and three-dimensional modeling techniques applied to simulate blood flow in the cardiovascular system. Steady and pulsatile flow in rigid and elastic tubes. Form and function of blood, blood vessels, and the heart from an engineering perspective. Sensing, feedback, and control of the circulation. Possible project using custom software to run blood flow simulations. Same as MMAE 455.
Prerequisite(s): BME 301 or MMAE 310 or MMAE 313 or Graduate standing
Lecture: 3 Lab: 0 Credits: 3

BME 475
Neuromechanics of Human Movement
Concepts from mechanics and neurophysiology will be introduced and employed to analyze and model human movement, especially of the extremities. Topics will include forward and inverse kinematics and dynamics, muscle modeling, and feedback control.
Prerequisite(s): BME 330 or ECE 308 or MMAE 305 or Graduate standing
Lecture: 3 Lab: 0 Credits: 3

BME 482
Mass Transport for Biomedical Engineers
This course seeks to provide students with an introduction to advanced concepts of mass transport with an emphasis on biological systems. Students will be exposed to derivation of the conservation equations for heat, mass, and momentum. Following derivation of these laws, focus will be placed on mass transport applications, including diffusion, convection-diffusion, diffusion with reactions, and facilitated diffusion. Students will be able to apply mass transport equations to solve problems in biological systems.
Prerequisite(s): BME 301 and CHE 202
Lecture: 3 Lab: 0 Credits: 3

BME 490
Senior Seminar
Lecture: 0 Lab: 0 Credits: 0
Satisfies: Communications (C)

BME 491
Independent Study
Focused reading and study under the supervision of a BME faculty member. A final written report is required to receive credit.
**Instructor permission required.**
Credit: Variable
Satisfies: Communications (C)

BME 492
Undergraduate Research
Independent research (experimental or theoretical/computational) under the supervision of a BME faculty member. A final written report is required to receive credit. **Instructor permission required.**
Credit: Variable
Satisfies: Communications (C)

BME 493
BME Undergraduate Project
Research or design project involving 2 or more students under supervision of a BME faculty member. A final written report from each student is required to receive credit. **Instructor permission required.**
Lecture: 3 Lab: 0 Credits: 3

BME 497
Special Problems
Design, development, analysis or research on special topics defined by a faculty member or the department. **Instructor permission required.**
Lecture: 0 Lab: 3 Credits: 3
