

DATA SCIENCE (DS)

DS 100

Introduction to the Profession

Introduces students to data science as a profession, as currently practiced and continuing to develop. Presents various elements of the data science life cycle at an introductory level, culminating with a start-to-finish data analysis project. Includes guest lectures from data science practitioners and faculty. Explores real-world examples of ethical issues, bias, and privacy in data science. Survey careers in data science and familiarize students with elements of career development.

Lecture: 3 **Lab:** 0 **Credits:** 3

DS 151

Introduction to Data Science

This course introduces the critical concepts and skills in statistical inference, machine learning, and computer programming, through hands-on analysis of real-world datasets from various fields.

Lecture: 3 **Lab:** 0 **Credits:** 3

DS 251

Mathematical Foundations for Data Science I

This course introduces the critical mathematical foundation knowledge for data science. Specifically, this course covers the basic topics on linear algebra and discrete math that are most relevant to the data science major.

Prerequisite(s): MATH 251

Lecture: 3 **Lab:** 0 **Credits:** 3

DS 261

Ethics and Privacy in Data Science

This course introduces the critical concepts and skills of ethics and privacy in data science, as well as hands-on implementation of important algorithms. It will cover important concepts of bias and privacy, and the computational strategies to ensure fairness and privacy in a variety of emerging data science applications. The course provided hands-on experience in collecting, analyzing, and modeling data for tackling ethical issues.

Lecture: 3 **Lab:** 0 **Credits:** 3

DS 351

Mathematical Foundations for Data Science II

This course introduces mathematical tools from optimization, differential equations, and numerical analysis etc. that are relevant to the data science major.

Prerequisite(s): DS 251

Lecture: 3 **Lab:** 0 **Credits:** 3

DS 451

Data Science Life Cycle

This course is designed to educate the data science students in the typical project life-cycle stages required in the data science professions. Stages of a data science project from start to finish such as obtaining data, exploring data, determining what questions the data can answer, exploratory analysis, ethical impacts analysis and mitigation, hypothesis (re-)formulation, in-depth analysis, validation, and reporting, are presented.

Prerequisite(s): DS 251 or MATH 484 or CS 484 or CS 422

Lecture: 3 **Lab:** 0 **Credits:** 3

DS 472

Data Science Practicum

In this project-oriented course, students will work in small groups to solve real-world data analysis problems and communicate their results. Innovation and clarity of the presentation will be key elements of evaluation. Students will have an option to do this as an independent data analytics internship with an industry partner.

Prerequisite(s): DS 451 or CSP 571

Credit: Variable
