

# DOCTOR OF PHILOSOPHY IN ARCHITECTURAL ENGINEERING

The objective of the Doctor of Philosophy in Architectural Engineering program is to provide a unique avenue for the advanced study of the design, construction, and operation of buildings and their systems. Students can specialize in any relevant aspect of Architectural Engineering in which CAEE faculty members have expertise, which includes: building energy and environmental systems, structures, or construction engineering and management. Through state-of-the-art and original research, students are expected to achieve a high level of mastery in the study of buildings and their systems, which should be demonstrated by successful defense of their dissertation and the publication of novel research results in peer-reviewed academic journals. Students who earn a Doctor of Philosophy in Architectural Engineering will be prepared for careers in both academia and industrial research and development. The program is intended for students with bachelor's or master's degrees in architectural engineering, civil engineering, mechanical engineering, or other related disciplines.

To be admitted to candidacy, students must pass a qualifying examination, which involves an oral presentation of two research papers selected by the student's adviser. The qualifying examination is administered by a research committee approved by the chairperson. The exam is diagnostic in nature. The results of the exam will determine the student's potential for success in the Ph.D. program. The department may waive this requirement for students who hold an M.S. degree from Illinois Institute of Technology in the same field. This examination should be completed within three semesters of entry into the program.

The candidate should pass the comprehensive examination at least one year prior to the date of graduation. The comprehensive examination is an oral examination that is administered by a research committee approved by the chairperson. The candidate presents the research proposal and answers questions of a general professional nature. The research project must be in harmony with the interests of the faculty and with the facilities of the department.

Although doctoral research can begin after admission to the Ph.D. program, the major portion of the research should take place after the comprehensive examination is passed and the research proposal is approved by the research committee. Research will be conducted under the supervision of a full-time faculty member and students should work to involve all members of their research committee.

The preliminary thesis draft must meet the approval of all members of the research committee. An oral examination in defense of the thesis is given as an open university seminar. The thesis defense must meet with the approval of the research committee; if it does not, the committee has the authority to determine whether or not to grant a re-examination.

Code	Title	Credit Hours
<b>Master of Science transfer coursework</b>		<b>(32)</b>
Maximum amount eligible for transfer is 32 credit hours		32
<b>Ph.D. Coursework</b>		<b>(16-28)</b>
Select 16-28 credit hours of 500-level and above CAE, CS, ENVE, MATH, or MMAE courses. <sup>1</sup>		16-28
<b>Ph.D. Research</b>		<b>(24-36)</b>
CAE 691	Research and Thesis Ph.D.	24-36

<sup>1</sup> 400-level courses and courses in other disciplines may be chosen as electives with adviser and departmental approval.

Requirement	Credits
Maximum Credits Required	84
Maximum 400-Level Credit	12
Maximum Transfer Credit	32
